

Ordering Playground Surfacing

Presently we have 75 cubic yards of Xylemmat, engineered wood fiber surfacing, at Brady Street Stadium. This is one of the surfacing materials discussed in a memo in August 2006 on playground surfacing. Xylemmat has been tested and passes both the ASTM F1951-99 test for wheelchair accessibility and the ASTM F1292-99 test for impact attenuation. Having a surface that is documented to have passed these tests is a large advantage if there are any legal problems in the future dealing with injuries on the playground.

This product can be ordered by the cubic yard from the warehouse as a stock item using either the paper or electronic ordering process. The warehouse will forward a copy of the S-form to maintenance for delivery purposes. If you have any questions or concerns about your order, please call Bob Spring at 388-5140 option 1.

It will still be the building's responsibility to spread the surfacing material around the playground area.

The district dump truck holds 5 cubic yards of the surfacing material.

The S-form should indicate the number of cubic yards of surfacing desired and the location where it should be delivered. While there is a charge to the building for the Xylemmat surfacing product, there is no delivery charge and the building also saves through semi-load purchasing. We assume this is a compliant and economical option for buildings.

Product: **Xylemmat Playground Surfacing**

Product Number: **005210**

Cost per cu. yd.: **\$22.00**
